No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                             2620

cytostatic, antiarthritic, antiasthmatic, immunosuppressant, antiarthritic, antiallergic, antidiabetic, antilipaemic? antiallergic, antidiabetic, antilipaemic? antitier antistement osteopathic, dermatological, antianemic, antipsoriatic, hepatotropic, antigout, antifilammatory and antimity activities, and regulate protein transport. PTAM proteins and antigonists are useful for perventing or treating a disorder associated with decreased or increased expression or activity of PTAM. PTAM polynucleotides are useful for diagnosing conditions associated with PTAM, comprising detecting PTAM by forming a hybridisation complex, preferably after PCR amplifying the biological sample. Diseases prevented, treated or diagnosed include cell proliferative disorders such as cancers, immune disorders, secretory disorders and other conditions associated with abnormal vesicle a targeting or delivery mechanism for bringing pharmaceutical agents into cells or tissues expressing PTAM and for diagnosis of PTAM-related disorders. PTAM, its catalytic or immunogenic fragments are useful for drug screening using libraries of compounds. PTAM polynucleotides are useful for generating hybridisation probes useful in mapping the trafficking, such as allergies, asthma, urticaria and autoimmune haemolytic anaemia. Anti-PTAM antibodies may be used as antagonists, as New human protein transport-associated polypeptide and polynucleotide useful for diagnosis, prevention and treatment of cell proliferative and secretory disorders such as leukemia, cystic fibrosis AAA08035 to AAA08042 encode the human protein transport-associated molecules (PTAMs) given in AAY82317 to AAY82324. The PTAMs have cytostatic, antiarthritic, antiasthmatic, immunosuppressant, naturally occurring genomic sequences Claim 1; Page 62-63; 75pp; English. WPI; 2000-256642/22. N-PSDB; AAA08037.

Primer sets for synthesizing polynucleotides, particularly the 5602 full-length to EDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.

8; SEQ ID 17891; 2537pp + CD ROM; English. Claim

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 3'-end sequence and an oligonucleotide comprises a 3'-end sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a complementary strand of a pering set least 15 nucleotides and the complation of the 5'-end sequence/3'-end sequence is selected from those defined in the 5'-end sequence/3'-end sequence is selected from those defined in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length without any specialised methods. AAH03166 to AAH13628 and AAH18731 to AAH18742 represent human cDNA sequences. AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification

The present invention describes primer sets for synthesising 5602
[11]-length cDNAs defined in the specification. Where a primer set
[12] comprises: (a) an oligo-dT primer and an oligonucleotide complementary
[12] comprises: (a) an oligo-dT primer and an oligonucleotide complementary
[13] complementary strand of a polynucleotide which comprises one of
[13] complementary strand of a polynucleotide with comprises one of
[13] complementary strand of a polynucleotide with comprises a 5'-end
[13] sequence and an oligonucleotide comprising a sequence complementary to the
[13] complementary strand of a polynucleotide which comprises a 3'-end sequence complementary to a
[14] sequence and an oligonucleotide comprises a 1-end sequence complementary to a
[15] coligonucleotide which comprises a 1-end sequence complementary to a
[16] coligonucleotide which comprises a 1-end sequence where the
[17] coligonucleotide comprises a 1-end sequence, where the
[18] coligonucleotide comprises a 1-end sequence withose defined in
[18] coligonucleotide comprises a 1-end sequence is selected from those defined in
[18] coligonucleotide comprises a 1-end sequence is selected from those defined in
[18] consideration. The primers are useful for synthesising polynucleotides,
[18] consideration and/or diagnosis of the abnormality of the proteins encoded by
[18] coligonal colig
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PTEVVLDDDREDLFAEATEEVSLDSPEREPILSSEPSPAVTPVTPTTLIAPRIESKSMSA 120

                                                                                                                                             ð
                                                                                                                                                                                                                                                      셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of aligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the polynucleotide which comprises a 3'-end sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a polynucleotide which comprises a 3'-end sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The purmer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynuclectides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs as an an analym without any specialised methods. AAH30316 to AAH3628 and AAH3633 to AAH3642 represent human cDNA sequences; AAB92446 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Primer sets for synthesizing polynucleotides, particularly the 5602 full-length DDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length CDNAs.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           an activated cell surface receptor expressed on a cell and direct translocation of the receptor to a lysosome in the cell. The nucleic acids encoding SNX are useful for the down-regulation of cell surface receptors for degradation when they are no longer required to carry out signal. The nucleic acids can be used to express the protein in a cell

```
an activated cell surface receptor expressed on a cell and direct translocation of the receptor to a lysosome in the cell. The nucleic acids encoding SNX are useful for the down-regulation of cell surface receptors for degradation when they are no longer required to carry out signal. The nucleic acids can be used to express the protein in a cell where expression is desired e.g. where cancer is caused by up-regulation of receptors. Antisense constructs can be used to inhibit native expression of the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TTKTSLSMFSKSEFSVKRRFSDFLGLHSKLASKYLHVGYIVPPAPEKSIVÖMTKVKVGKE 224 [[::|||:||:||:||||||||||||||||| TTQTSLPLFRSKQFAVKRRFSDFLGLYEKLSEKHSQNGFIVPPPPEKSLIGMTKVKVGKE 227

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PTLLODPDLROFLES-SELPRAVNTQALSGAGILRMVNKAADAVNKMTIKMNESDAWFEE 308
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   KOOOFENLDQQLRKLHVSVEALVCHRKELSANTAAFAKSAAMLGNSEDHTALSRALSQLA 368
